

Insulation: Products & Services

Want more comfort and savings at home? Consider wall insulation. Here's why:

Why Insulate?

Increases thermal efficiency
Reduces drafts, sound movement, and dust
Less condensation and related issues
Lower heating costs
Faster payback (usually 5-10 years)

Materials

- Cellulose: Shredded, fire-retardant newsprint. Fits anywhere, reduces air infiltration.
- Mineral fibers: Appropriate for moist areas. Require larger drill holes, more pressure to install.
- Foam insulation: Higher R-values but may cause problems (bowing, shrinkage).

Remember, installation process may also include vapor barriers and vents.

Before deciding, consider your home's needs and the material's properties. Always hire a professional for the best results.
